Dry Embossing

Here's what you need:

Light Table

Paper or Card Stock

Embossing Templates

Stylus Embossing Tool

Optional: Chalks

Follow these easy instructions and create this great project in just 3 steps!

1. Position your template on the light table and tape it into place. Position your paper or card stock to be embossed over the template with the wrong side up. You may wish to tape your paper to the light table so it won't move.
2. Use a stylus to apply pressure along the cutout edges of the template, tracing the image.
3. If desired, you can add color to the embossed image with chalks.
