## Envirotex Frames

### Materials Needed:

MDF Frame  
8 oz. Envirotex High Gloss Coating  
Mixing Cup Set  
Paint and or Embellishments  
Glue Stick  
Foam Brush  
Craft Stick  
Plastic container with a lid big enough to fit your frame with the cups underneath (or an empty box)

### INSTRUCTIONS:

1. Remove glass from frame.
2. Paint frame with acrylic craft paint.
3. Adhere stickers, paper, rub on's, etc... to frame to embellish.
4. Place a couple of cups in the plastic container and put the frame on top of the cups. This will help the liquid to drain and the container will catch the drips.
5. Mix Envirotex (approx. 2 oz. total) and pour over elevated frame. [Click here to get more details on "How to use Envirotex High Gloss Coating"](#).
6. Catch the drips with a craft stick on the inside of the frame; this ensures that the glass will sit leveled in the frame.
7. Cover the container with the lid and let dry overnight. The lid prevents any dust from falling on your frame while drying.
