Hanging Topsy Pots

Supply List:

Base bar - support loop on one end
4" diameter or larger pots with center drainage hole

Instructions:

Hold base bar with loop toward ground. Slide first pot onto base bar through drainage hole and tilt pot as if tipping over- it will be supported by the loop at bottom of base bar.

Add soil to first pot then slide second pot over base bar tilting it to opposite side, resting its bottom on the lip of first pot for support. Fill with soil.

Then continue adding pots and soil, alternating tilt direction as you go up.

Leave enough length at end of base bar to bend a hanging loop that will allow the tipsy pots to be hung from a hook, awning or tree branch. Finally add plants and water.
